

H&H Construction Ltd
(Scotland)

ASSESSING & RECORDING QUALITY CONTROL ON OUR PROJECTS

To assess quality control on site, both selection of materials & workmanship is assessed through the following procedures which are carried out from start to completion. These may vary depending on the size & scope of the project.

- Ordering & checking of materials that are suitable for their intended purpose & suit the standard of project being carried out.
- Adhering to specified timescales e.g. curing or drying times.
- Continual monitoring of workmanship by site foreman/supervisor.
- Written & photographic recording of aspects of construction as work progresses specifically foundations & drainage layouts e.g. Showing reinforcement prior to concrete.
- Liaising between ourselves and nominated subcontractors to ensure works are carried out to a high standard, on time & in line with the programme of works.
- Regular site meetings with architect/client, bringing to their attention any issues/questions/concerns.
- Nearing completion, more regular inspections for quality of finishings and details, picking up potential snagging prior to final completion.
